Figure 1 consists of two line graphs, (a) and (b), plotting the rate of reaction against temperature. Both graphs have a y-axis labeled 'Rate of reaction' and an x-axis labeled 'Temperature / °C'.

Graph (a) shows a bell-shaped curve. The rate of reaction starts at 0 at 0°C, rises to a peak of 10 at 40°C, and then falls to 0 at 80°C. The curve is labeled with '10' at the peak and '0' at the start and end points.

Graph (b) shows a curve that rises sharply from 0 at 0°C to a rate of 10 at 40°C, and then levels off at a rate of 10 for temperatures up to 80°C. The curve is labeled with '10' at the peak and '0' at the start point.

Co., appl. 22 Aug 56, granted 15 Sep 56.

DESCRIPTORS: *Speed regulators, Design.

The present invention concerns a speed reducer consisting of an input shaft, a driven member, and a coupling apparatus which reduces the motion of the input shaft while transmitting it to the driven member. The apparatus consists principally of a coupling ring concentric with the axis of the input shaft and a coupling disk located between the coupling ring and the end of the input shaft. The end of the input shaft applies pressure to the disk at a point other than the center; since the disk is supported at its center it will normally be inclined with respect to the axis of the (Machinery--Machine Parts, TT, v. 7, no. 10) (over)
